Medicaid Legacy Data Management

powered by  **ClearView™**

Trinisys revolutionizes the way government agencies aggregate, process, and access legacy data from business management solutions like ProLaw® and Serena Business Manager.

Government agencies are lean and stretched thin. With demands and caseloads increasing, departments are expected to work quickly and accurately, however, this can be difficult when dealing with disparate applications that prevent efficient data retrieval and access.

Medicaid Legacy Data Management powered by ClearView (MLDM) enables government and Medicaid agencies to decommission legacy systems through legacy data archival and migration. Utilizing Trinisys Convergence, historical data such as case information and history are migrated to a streamlined application that can be accessed from the go-forward system via contextual link. Additionally, MLDM reduces compliance and security risks, and helps teams be more productive by having a comprehensive data set easily and instantly available.

Application Features

Intuitive user interface manages all current and historical data that can easily be retrieved and exported

Application can be hosted in the Cloud or on the existing IT infrastructure depending on the agency's needs

Detailed auditing functionality records all user activity and can be integrated with third-party compliance management applications

Advanced search functionality enables users to quickly search by fields like MCC group, date, submitter, case ID, document name, etc.

Secure login to a web-based portal with role-based access to tabs and reports

Efficient single sign-on capabilities via active directory authentication

Diverse Needs. One Flexible Solution.

As demands and caseloads increase, having a unique solution that can store both current and historical data is necessary for team productivity, accuracy, and consistency. MLDM powered by ClearView has a scalable infrastructure that can support additional users, data, and features to meet the growing needs of the agency.

Organization-Wide Impact

Whether it's the IT team looking at the bigger picture, or the end user working on day-to-day details, MLDM powered by ClearView adds value by eliminating maintenance and support costs associated with legacy systems, as well as enabling greater efficiency and productivity when managing cases.

Benefits of MLDM powered by ClearView

- Automated, streamlined, and secure solution provides users with immediate access to the information needed
- Eliminates data silos and connects users to vital data across the organization
- Platform-level security standards ensure data is protected in motion and at rest
- Advanced document management tools organize documents and eliminate redundant data entries
- Scalable technology grows with the organization and accommodates additional users and capabilities
- Frees up money in the IT budget by eliminating maintenance and support costs and reducing unnecessary resources associated with legacy systems
