Trinisys Government and Medicaid Solutions

Trinisys' Government Division recently joined forces with **NASPO** and **Insight Public Sector** to provide State and Local government agencies and municipalities with the tools necessary to smoothly facilitate transactions, streamline processes, and drive growth and productivity.

Trinisys has been working with its government and Medicaid clients to create solutions that simplify and improve workflow and intake processes, migrate data from one-off legacy systems, implement Medicaid application processing, provide digital health dashboards, and ensure contract compliance around Managed Care Organizations (MCOs). Trinisys' solutions backed with powerful features from its Convergence platform including an advanced workflow architecture that enables organizations to modernize their internal processes.

Streamlined workflow and automation capabilities eliminate cumbersome and complex manual tasks

Light code, scalable, user-friendly technology is capable of adapting to additional capacity needs and assists in onboarding new employees with little training

Advanced security features from the Convergence platform, paired with the integration of the organization's current security scheme, ensure all data is protected, in motion and at rest

Full audit capabilities, workflow history, and document tracking records user activity to provide greater transparency to regulators for auditing purposes

Benefits of Trinisys' Government/Medicaid Solutions

- Intuitive, user friendly applications are equipped with clean and modern interfaces to support greater productivity and efficiency
- Manual and time-intensive tasks are eliminated with configurable automated processing and complex back-end workflows
- Full support for data in legacy systems allows users to easily access historical data and experience a seamless transition to new systems without having to support legacy code
- Advanced security features allow for role-based assignments and a full integration with existing Active Directory systems, providing better security for users who are external to the organization
- Compatibility to be interoperable with Trinisys' Digital Health solution
- Scalable technology allows for additional enhancements and supports new development features as the organization grows and takes on additional capacity
- Reporting tools provide users with detailed insight on the nature of documents in and across the system and within assigned groups, and the tools give managers and supervisors the ability to visualize teams and view specific user activities

Trinisys has designed and developed multiple solutions for various State and Local government departments to solve a variety of challenges around contract compliance, Medicaid application processing, digital health, etc. See specific use cases of the technology solutions we have implemented for a State below.

Medicaid Member Document Management and Digital Health Services (MMDM) – assists states with the processing, management, and retention of Medicaid applications and documents.

The Oversight and Processing System – is an implementation of the Medicaid Contract Compliance Reporting System (MCCRS) helps offices handling contract compliance with overseeing, monitoring, tracking, and examining Managed Care Organizations (MCOs) participating in each state's program.

Medicaid Legacy Data Management powered by ClearView - legacy data archival and migration for the State's systems such as ProLaw™, Serena Business Manager, Maximus®, Instream, and others.
