

The **One Platform Archive** optimal for all customer sectors and their unique business needs.

Each ClearView module hosts its own set of unique features to meet business needs across various departments. ClearView propels businesses forward through legacy system decommissioning, making data rapidly accessible and available.

## Benefits

- ✓ Disparate and non-strategic legacy data is consolidated and accessible in a single repository that receives regular security scans and updates
- ✓ Indexed archives and advanced search functionality enable rapid data retrieval
- ✓ Maintenance and support costs associated with legacy systems, as well as the long-term storage costs of a rigid document repository that provides limited flexibility, are eliminated
- ✓ Controlled data access with role-based views and reportable audit trails
- ✓ Retain vital information in accordance with legal requirements

## ClearView Clinicals

ClearView Clinicals enables providers to securely access and report on patients' full historic health records directly from their current EHR platform via contextual link. Utilizing efficient single sign-on capabilities via active directory authentication, clinical teams and HIM professionals have a single repository for patient data.

## ClearView Patient Financial Services (PFS)

With ClearView PFS organizations are able to continue collection efforts from decommissioned legacy financial systems. The PFS module consolidates legacy data for efficient A/R wind-down and collection agency management and is offered in three tiers that range from a static PDF archive to detailed billing functionality.

## ClearView Enterprise Document Management (EDM)

ClearView EDM preserves administrative data from legacy Enterprise Resource Planning (ERP) systems related to general ledger (GL), human resources (HR), payroll (PR), materials management (MM), and accounts payable (AP) reports in an easy to access and organized archive, allowing organizations to retain employee records, consolidate data, and eliminate maintenance associated with the legacy system(s).

## ClearView Health Information Management (HIM)

ClearView HIM delivers a set of enhanced functions to seamlessly process Release of Information (ROI) requests from inception through delivery. Users can capture historical patient data from various legacy systems and make appropriate updates to the archive as needed. Additionally, ClearView HIM preserves document tracking and implements notes and administrative holds to facilitate this process while maintaining a detailed and compliant audit trail.

## ClearView Blood Bank

ClearView Blood Bank enables users to easily search, retrieve, and view archived blood data in a discrete tabular format. These details help in maintaining and monitoring the blood deposits for clients by facility system(s).
