trinisys
ClearView™
Health Information Management

Trinisys' newest module, ClearView HIM, was developed to support Health Information Management professionals by delivering a set of enhanced functions to seamlessly process Release of Information (ROI) requests from inception through delivery. The record management tool extends and works seamlessly with our clinical legacy archive solution, ClearView LAS.

ClearView HIM allows users to capture historical patient data from various legacy systems and make appropriate updates to the archive as needed. Additionally, ClearView HIM preserves document tracking and implements notes and administrative holds to facilitate this process while maintaining a detailed and compliant audit trail. With the added HIM functionality, now organizations with the most sophisticated workflows and requirements can manage health information efficiently and accurately.

Features Include:

- Patient Maintenance screen with advanced workflow capabilities that allow users to review, upload, and amend charts and documents.

- Track document changes and place administrative holds and notes on accounts

- Comprehensive patient search and look up

- Powerful search capabilities provide users with greater depth across the breadth of archived information.

- Automated ROI generation

- Administrative functions include authorization and authentication requirements, auto-archive, audit controls, reporting, etc.

For more information about ClearView HIM, please contact us at 877-874-6479 or sales@trinisys.com.
