## **Trinisys Announces Strategic Partnership with Professional Recovery Consultants, Inc.**

### ***Unique Offering Helps Healthcare Organizations going through System Implementations***

Brentwood, TN (February 21, 2018) — Trinisys, Inc., a leading provider of enterprise data migration, integration and web application solutions for the healthcare industry, announced today that it has joined forces with Durham, NC-based Professional Recovery Consultants, Inc. “PRC,” a premier provider of fast, efficient debt recovery and accounts receivable services.

With the partnership between Trinisys and PRC, healthcare organizations who typically have to seek out a variety of solution providers in order to, not only find a cost-effective way to access and manage historical patient records, but also to determine the best solution for legacy accounts receivable management, can now rely on the joint expertise brought by Trinisys and PRC’s new offering.

“Time and again, we find ourselves being asked for legacy accounts receivables solutions as part of data management conversations. PRC is the right partner,” said Antoine Agassi, CEO/President of Trinisys. “The PRC partnership allows us to offer a unique solution to help organizations deal with two often overlooked elements of a major implementation – archiving legacy systems and accounts receivable work down. The combined Trinisys-PRC offering solves that by bringing greater depth of experience, expertise and budget relief to implementation projects.”

The combined solution includes active archiving to capture ongoing A/R account activity and incorporates that information into Trinisys ClearViewHRV®. Our unique approach frees organizations to focus on system implementation and current accounts, while PRC handles legacy accounts. Once the accounts receivables are resolved, historical accounts receivables are preserved in Trinisys ClearViewHRV®. Combined, Trinisys and PRC can help healthcare organizations and physician groups address both A/R work down and archives.

“We are excited to partner with Trinisys,” said Geoff Miller, president of PRC. “This partnership allows both parties to focus on their true expertise. Our ability to effectively work down A/R enables Trinisys customers a more complete solution for healthcare organizations.”

## **About Trinisys**

Trinisys continues to change the way organizations approach enterprise data conversions, system integrations, workflow automation and web application solutions. Our success is based on the company's philosophy and work culture that drives continuous innovation of quality software that addresses real business challenges. The power of the Convergence platform allows organizations to leverage intuitive integration capability with automated process and workflow. Trinisys Clearview HRV (Historic Record Viewer) builds on the capabilities of Convergence enabling comprehensive, efficient and secure legacy clinical system conversions. ## **About PRC**

Professional Recovery Consultants was founded in 1979 and has since grown to become a premier provider of fast, efficient, and hassle-free debt recovery and accounts receivable services for the healthcare industry. This growth has been a direct result of our concentration on client service, while remaining on the cutting edge of new technology and collection technique development.

PRC stresses the measurement of a collector's productivity is not solely the amount of money collected, but also sustaining positive customer relations on behalf of each of its clients. For more information, visit [prorecoveryinc.com](http://prorecoveryinc.com).
