Company Overview: Trinisys is a leading provider of enterprise data migration, integration, normalization, and workflow automation related to health system archival. Proven in some of the largest healthcare settings, Trinisys has over 16 years of experience perfecting rapid and reliable software solutions that reduce organizational cost, improve quality, and ensure security and compliance.

ClearView Legacy Archive Solution Overview

ClearView Legacy Archive Solution (LAS) is the complete, secure solution for legacy data archival, migration, translation, and normalization. This solution allows providers to securely access and report on patients' full historic health records (clinical and financial) directly from their current EHR platform. Utilizing efficient single sign-on capabilities via active directory authentication, clinical teams and HIM professionals have a single source of truth for patient data. ClearView LAS also provides the organization with an added layer of security for static data with automated audit detail that exports to compliance management applications like FairWarning and others.

Business Benefits

- Retirement of legacy systems positively impacts the hospital and IT budget. In most cases, year one savings cover system archival costs, allowing maintenance and support funds to be allocated to other projects
- Reduce compliance risk
- Enhance go-forward EHR utilization through direct integration
- Scalable technology that can support future acquisitions/mergers, etc. (expanding ROI)
- Improve quality of data, making available both discrete and non-discrete
- Enhance staff productivity through comprehensive information and data availability with quick access via single sign on

Key Features

- Legal Medical Record (including financial), archived from legacy systems, placed into a consolidated viewer embedded directly into the current EHR system
- Clinicians and other authorized users can view, search and report on patients' full medical records
- View and report on records at the document or encounter level
- Data fully secure in motion and at rest along with advanced auditing capabilities with the ability to export to monitoring services

Differentiators

- Proven large enterprise engagements with the ability to scale up or down
- Owns 100% of the technology intellectual property (IP)
- In-house (W2 only), virtual project and development teams
- Successful, repeatable methodology
- More cost-effective proven technology leverage and automation
- Lower customer resource requirement for implementations
- Highly configurable and intuitive user interface
- Advanced end-to-end audit detail

Organizational Questions

1. Do you have existing legacy clinical and/or financial systems?
2. Have you developed a strategy for your legacy data archival related to the EMR conversion or acquisition?
3. Have you recently acquired or merged with another organization?
4. Do you know where to begin finding the right legacy vendor partner?
5. Are you willing to entertain a no cost conversation with one of our LAS specialist?
