

THE ONE PLATFORM ARCHIVE OPTIMAL FOR ALL CUSTOMER SECTORS AND THEIR UNIQUE BUSINESS NEEDS.

ClearView revolutionizes the way organizations traditionally aggregate, process, and access historical information from legacy systems. The One Platform Archive allows you to cost-effectively access and manage legacy data in a single source of truth.

Reduce Costs

Retirement of legacy ERP systems positively impacts the IT budget, allowing funds to be allocated to other projects.

Increase Productivity

The single source of truth eliminates the hassle of searching legacy systems for critical data.

Improve Quality

Immediate access to legacy records reduces errors or delays in care delivery.

Ensure Security

Legacy data will be stored safely and creates an additional security layer.

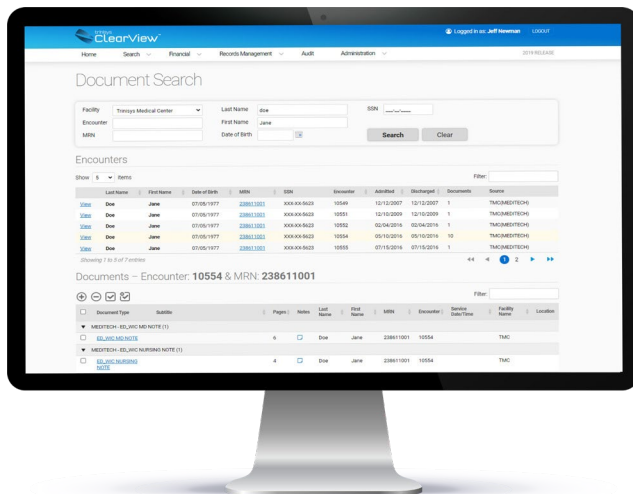

Diverse Needs. One Flexible Solution.

Trinisis offers control over various types of data, including clinical, patient financial, ERP, and blood bank data. Our team helps organizations with legacy system archival, aiding in cost containment, application rationalization, and vendor consolidation. With expertise in archiving numerous source systems, we can manage applications, saving resources and eliminating maintenance costs. The ClearView One Platform Archive allows providers to access present and historical data securely and rapidly from a single source, enhancing staff productivity, improving account accuracy, and supporting high-quality care. ClearView and its modules are HITRUST certified.

ClearView Delivers

- ▶ Ability to automate your specific ROI per system
- ▶ Records retention and cleanup ability via our Purge functionality
- ▶ Consolidated view of data from multiple source systems with extensive and customized search criteria and data presentation
- ▶ Import/conversion of numerous source image and document formats
- ▶ Single sign on capabilities through go-forward system via contextual link/Active Directory integration
- ▶ Document Management capabilities archive, consolidate, and compile non-patient centric documents into an easily searchable and accessible format to support legal documentation requirements
- ▶ Comprehensive set of functions enable organizations to continue collection efforts from decommissioned legacy financial systems while performing detailed billing functionality
- ▶ Security levels based on source system, document/record type, or user and equipped with full audit capabilities
- ▶ Dedicated team approach to reduce workload of organization's internal resources
- ▶ Two hosted offerings: Cloud or On-Premise

With our extensive experience in health systems' enterprise needs, Trinisys excels in identifying data migration, conversion, storage, and access requirements. Trinisys has integrated with over 200 electronic health, practice management, and patient financial systems, showcasing our expertise in the field.

Key Challenges Solved

Significant maintenance and support costs for legacy systems

Lack of timely, at-your-fingertips access to historical records

Poor security with non-compliant, out-of-date legacy systems

Productivity issues related to the arduous task of manually retrieving data from systems

Data silos and the inability to aggregate disparate data for effective use and timely care
